

# EMILIA KLIMEK

Nauczycielka w Przegini duchownej,

po długiej a dolegliwej słabości, w 18 wiośnie życia swego, przeniosła się do wieczności  
dnia 29 Grudnia 1878 r. w Krakowie.

W żalu pogrążona Familia, zaprasza Krewnych, Przyjaciół i pobożną Publiczność, na wyprowadzenie zwłok  
z Kliniki w dniu 31 Grudnia b. r. t. j. we Wtorek, o godzinie 3 po południu na miejsce wiecznego spoczynku.

1911

1. The first of the series of experiments was conducted on the 1st of January, 1911, at the University of California, Berkeley, California. The object of the experiment was to determine the effect of the temperature of the water on the rate of the reaction between the hydrogen peroxide and the potassium permanganate.

The results of the experiment were as follows: The rate of the reaction was found to be directly proportional to the temperature of the water. The rate of the reaction was found to be directly proportional to the concentration of the hydrogen peroxide. The rate of the reaction was found to be directly proportional to the concentration of the potassium permanganate.

The following table gives the results of the experiment: The rate of the reaction was found to be directly proportional to the temperature of the water. The rate of the reaction was found to be directly proportional to the concentration of the hydrogen peroxide. The rate of the reaction was found to be directly proportional to the concentration of the potassium permanganate.

The following table gives the results of the experiment: The rate of the reaction was found to be directly proportional to the temperature of the water. The rate of the reaction was found to be directly proportional to the concentration of the hydrogen peroxide. The rate of the reaction was found to be directly proportional to the concentration of the potassium permanganate.

The following table gives the results of the experiment: The rate of the reaction was found to be directly proportional to the temperature of the water.
